EDUCATION

University of Washington | Expected December 2026

Bachelor of Science in Data Visualization | *Relevant Coursework: Advanced Statistics, Database Systems, Data Structures*

TECHNICAL SKILLS

Languages: Python, SQL, HTML, CSS

Data & Machine Learning: Pandas, NumPy, scikit-learn, PCA, t-SNE, DBSCAN, NLP (spaCy, GLiNER), CLIP zero-shot classification, hyperparameter tuning

Visualization & BI: Tableau, Power BI, Matplotlib, Plotly, interactive dashboard development

Data Engineering & Tools: ETL pipeline development, relational database design, data validation/QA, Excel (pivot tables, VLOOKUP), Git

EXPERIENCE

Data Science & Machine Learning Intern — *American Institute of Physics* | June 2026 – August 2026

- Engineered a data pipeline to extract and process text transcripts from the AIP Emilio Segrè archives, enabling downstream NLP analysis across the collection
- Built an interactive dashboard visualizing DBSCAN-clustered data embeddings alongside associated archival images, improving researcher ability to explore document groupings
- Applied PCA and t-SNE for dimensionality reduction and cluster visualization; benchmarked CLIP zero-shot classification against DBSCAN to identify the strongest approach for archive categorization
- Contributed to a Named Entity Recognition dashboard using GLiNER and spaCy, supporting automated extraction of key entities from unstructured text

Data Analyst Research Assistant — Database & Pipeline Development — *USA National Phenology Network* | March 2025 – June 2025

- Designed and maintained a relational database supporting long-term phenology research datasets used by federal researchers
- Built an automated ETL pipeline to import and validate CSV data into a local database, reducing manual data entry by 50%
- Developed temporal and geographic visualizations to surface patterns in phenological data, improving research dataset accessibility and reusability

Project Assistant — *UW Bothell Student Engagement & Activities* | September 2024 – September 2026

- Built a predictive model estimating club inventory borrowing patterns from historical usage data, informing purchasing decisions
- Tracked inventory usage trends via automated spreadsheets and dashboards, reporting KPIs directly to department leadership
- Improved inventory planning accuracy by approximately 73% through data-driven demand profiling across student clubs

Data & Analytics Intern — *Washington Native Plant Society* | July 2024 – September 2025

- Performed data quality control and validation on organizational records, reducing manual correction time and improving CSV/spreadsheet accuracy
- Built a metadata taxonomy and used web scraping to fill gaps in multimodal asset metadata, improving discoverability for non-technical staff; presented findings to the Board of Directors
- Built marketing campaign dashboards and KPI tracking, and authored a market research report using predictive analysis to recommend new marketing channels

Undergraduate Teaching Assistant — *UW Digital Scholars Program* | September 2024 – December 2024

- Mentored and taught Python fundamentals (syntax, debugging, package management) and web basics (HTML, CSS, JSON) to a cohort of over 30 students
- Built visualizations tracking student learning progression, giving the incoming instructor data-driven context on cohort knowledge gaps

ADDITIONAL EXPERIENCE

Research Assistant, Yonsei University (May 2025–September 2025) — Conducted statistical analysis and literature review supporting research on human-data interaction within SMART city urban planning initiatives.
